			the sequence listing (specify):		
		<u></u> П	any table(s) related to sequence listing (specify):		
*	If ite	m 4 app	olies, some or all of those sheets may be marked "super	rseded."	

International application No.			
PCT/EP2004/010885			

Box	k No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement	
1.	Statement Novelty	(N) Claims 1-8	YES
	Inventive	Claims Claims 1-8 Claims	3.50
	Industria	al applicability (IA) Claims 1-8 Claims	YES
2.	Citations an	ad explanations (Rule 70.7)	
	1.	The present report makes reference to the following documents:	
		D1: DE 199 17 673 A (ZAHNRADFABRIK FRIEDRICHSHAFEN) (2000-10-26) D2: US 2 896 479 A (KELBEL DONALD W)	
		28 July 1959 (1959-07-28) D3: US 4 573 373 A (SHIMIZU YASUO ET AL)	
		4 March 1986 (1986-03-04) D4: US 4 489 626 A (LEMON ROBERT W) 25 December 1984 (1984-12-25).	
	2.	Document D1 is considered to be the closest prior art. Said document discloses, as per the preamble of claim 1 (the references in brackets are to said document):	
		a spindle gear (1), comprising a drive shaft (2), a output shaft (3) and a two-step planetary gear system between the drive shaft and the output shaft in the direction of power flow. The planetary gear system includes a sun gear connected to the drive shaft (4), a ring gear (5)	

#### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

seated in a ring gear bearing (6), and a planet carrier (7) with planets (8) forming the output of the planet gear system, from which the subject matter of independent claim 1 differs in that: the gear system is provided with an oil inlet, which is connected to an oil pump located outside the gear system, and the output shaft bearing and the ring gear bearing can be lubricated by the circulation of oil.

2.1 The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

The problem addressed by the present invention can consequently be regarded as that of reducing the loss of oil between the bearings.

- 2.2 The solution to the above problem, as proposed in claim 1 of the present application, involves an inventive step (PCT Article 33(3)) since the prior art does not disclose a piston ring located between the two output shaft bearings and provided with an oil duct.
- 2.3 Claims 2-8 are dependent on claim 1 and, in consequence, likewise satisfy the requirements of the PCT in respect of novelty and inventive step.
